<div align="center">Lab 3 Reflection</div>

For Lab 3, I decided to re-do my Lab 2 code. For Lab 2, I decided to make a simple calculator. However, my lab 2 code was rough and i wasn't satisfied with it. For Lab 3, I decided to work on Lab 2 and re-work it into a Final Class Grade Calculator. I did leave some parts unfinished however, for the most part I was satisfied.

I selected to use Assembly language because I did not know how to go about designing a language. I found ASM difficult as it is so abnormal compared to higher level languages. However, I used resources online to guide me. I learned that I prefer higher leveled languages than lower level languages. I respect those who know assembly or any lower level language.

To conclude, I would like to continue to develop my simple final grade calculator. Not only will I complete it, but it would be good practice. I want to add more features and fix errors.
